

Web Design II: Dynamic

ADA38801

Instructor:

John Kuiphoff

kuiphoff[at]tcnj[dot]edu

Time: M 5:00pm – 8:50pm

Location: Bliss Hall Room 31

Description:

During the next fifteen weeks, we will learn how to design and develop dynamic web applications using PHP, MySQL, HTML, CSS and Javascript. By the end of the semester, you will learn how to create full-fledged dynamic web applications from scratch. We'll be spending a lot of time consuming, digesting and producing dynamic web content.

Grading:

All assignments must be presented on the due date. Assignments not handed in at all will receive an "F" grade. Assignments handed in late, without a proper excuse, will receive a grade penalty. Projects may be reworked and re-submitted, after initial critique and grading, for re-grading. Re-submission does not guarantee a higher grade.

30% - Small Projects & Exercises

50% - Final Project

20% - Participation

Required Texts:

PHP6 and MySQL, Larry Ullman

Course Website:

Server Space:

The art department has generously provided us with server space that contains all of the necessary tools needed when building dynamic web applications. Because this is a shared space, please be mindful of other student work. Also, do not share the username and password with anyone outside of this class.
